

Lex Machina API

We have spent years building the most advanced Legal Analytics dataset in the industry. Our award-winning Legal Analytics platform helps lawyers gain a winning edge over their competition. Our data is available not only through our platform, but also directly via API.

The Best Legal Analytics in All Areas of the Law

Only Lex Machina provides:

AI + ATTORNEYS

Artificial intelligence and technology-assisted human review to deliver comprehensive case resolutions, damages, remedies, findings, and accurate counsel and party data.

PARTIES

Detailed litigation data for litigants and the attorneys who represent them, including breakdowns by company industry, size, and NAICS codes. The performance track record of a law firm or attorney. The decision pattern of a judge. The historical litigation behavior of a specific company.

COVERAGE

Coverage of all civil cases filed in federal district court and federal appellate courts, specialty courts, and an ever-expanding selection of state courts.

ACCURACY

The firms and attorneys involved in litigation that other tools miss. Advanced technology (such as patented Attorney Data Engines and Signature Block Analyzers) and attorney review to extract, correct, clean, and enhance the data available on the docket, in order to achieve the highest level of accuracy possible. If you need to know everyone involved in a case, Lex Machina is the only tool that can provide this information.

OUTCOMES

In-depth data-driven insights on case resolutions, damages, findings, and remedies. The prevailing parties. The amount of money awarded. The length of time it took to reach case termination. The findings of law.

Wherever And Whenever You Need It

The same Lex Machina data relied upon by the AmLaw 100 and Fortune 500s is now available via REST API. Deliver Lex Machina's unique data into the tools your colleagues are using, where they need it and when they need it. Streamline your organization's workflow and bring the data-driven advantage directly to your people. Sample use cases include:

BUILD NEW DATA VIEWS

Create customized data trends by practice area or industry over a specific period of time.

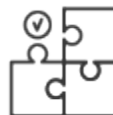

BUILD NEW ALERTING TOOLS

Build customized alerts based on the parameters your team monitors for new litigation.

FIND NEW INSIGHTS

Analyzing bulk datasets on key data points such as specific counsel, judges, outcomes, and damages in order to assess and evaluate past and present cases.

AUTOMATE & IMPROVE BUSINESS DEVELOPMENT

Match data on client information to matter management software in order to survey the full lifecycle of a client matter.

COMBINE EXTERNAL & INTERNAL DATA

Combine LxM data and widgets with internal systems and workflow to create a customized litigation dashboard to better monitor ongoing company litigation.
