

Lex Machina's award-winning Legal Analytics® platform allows outside counsel and in-house attorneys to anticipate the behavior of courts, judges, lawyers, law firms, and parties. Over 80% of Am Law 100 firms and some of the largest global corporations use Legal Analytics to supplement traditional legal research with previously unavailable strategic insights that gives them a winning edge.

The vast majority of cases in the United States are litigated in state courts, and the courts in Oklahoma are important venues for state court litigation. Lex Machina's Legal Analytics for Oklahoma courts include twelve state courts serving the following counties: Adair, Canadian, Cleveland, Comanche, Ellis, Garfield, Logan, Oklahoma, Payne, Pushmataha, Roger Mills, Rogers, Tulsa. These courts cover large swathes of the Oklahoma City and Tulsa metropolitan areas, major commercial and cultural epicenters in which approximately two million citizens reside and conduct business. They are important courts for civil cases involving contracts, torts, real property, medical malpractice, and other civil matters. Now, Legal Analytics is available for civil cases filed in courts that serve a majority of the population of Oklahoma.

## The Winning Edge

Lex Machina gathers raw information from state court cases and the underlying documents, and then it uses a unique Al engine to clean, tag, enhance, and present the resulting data in a way that allows users to make data-driven decisions. Lex Machina is the only analytics provider that has both the documents and the technology to ensure that the resulting data is as accurate and complete as possible. Lex Machina also adds high-value trial outcomes data to reveal who won cases and what the damage awards were.

Practitioners can now investigate a party's litigation track record, assess a law firm's experience in similar cases, understand the range of damages awarded at trial, or search docket entry text across states.

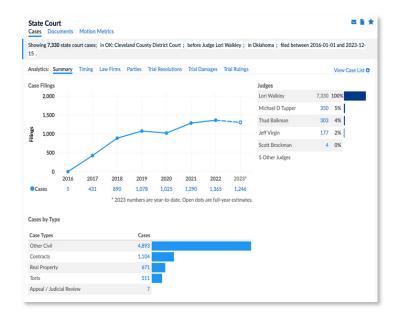

The Legal Analytics platform provides data-driven insights and trends in state court. Advantages of state court analytics include:

- Understanding timing to key litigation milestones
- Analyzing the record of a specific judge, law firm, attorney, or party
- Reviewing previous trial resolutions, trial damages, and trial rulings for case strategy
- Refining with court-specific filters such as case types and case tags
- Viewing analytics across all state courts or in one particular court
- Keyword searching within docket entry text and downloaded documents

Lex Machina helps you answer questions such as:

- What is the median time to trial and time to termination for cases terminated in Oklahoma County District Court?
- Has an opposing attorney ever appeared in a case before Judge Walkley in Cleveland County District Court? If so, how many cases were Real Property cases, and did any go to trial?

- In Canadian County District Court, Comanche County
   District Court, and Rogers County District Court, how
   many Torts cases had damages awarded at trial? Which
   cases are those and what were the damages in each case?
- Who are the most active law firms representing defendants in Payne County District Court that have been involved in Torts cases over the past five years?

## **Unique Litigation Data**

Lex Machina allows users to filter by the information such as the following in order to find the most relevant cases:

**Document Tags** – Petition, Answer, Order, Jury Verdict, Judgment

**Trial Damages** – General Damages (Judgment on the Merits), General Damages (Jury Verdict), Attorneys' Fees / Costs

**Trial Rulings** – Bench Trial, Jury Verdict, Default Judgment, Other Judgment

**Trial Resolutions** - Plaintiff Win, Defendant Win, Likely Settlement
